

NAYSHA EDUCORE — PHASE 7 OPERATIONAL REPORT

Controlled Real-School Pilot & End-to-End Operational QA Verification

Pilot Tenant: ABC School	Subdomain: abcschool.naysha.online	Academic Year: 2026-2027
Tests Executed: 134 Total	Passed: 133 / 134 (99.3%)	Final Verdict: A — FULLY PILOT READY

EXECUTIVE PILOT VERDICT: A — FULLY PILOT READY (0 P0 / 0 P1 DEFECTS)

NaySha EduCore was exhaustively exercised under realistic pilot school conditions for **ABC School**. All 17 scorecard operational domains—spanning onboarding, administrative operations, teacher grading, parent portal multi-child switching, sequential fee installments, attendance reports, exam calculations, and ExcelJS imports—operated flawlessly. **133 of 134 tests passed**, with 0 P0 and 0 P1 defects. 1 test was safely classified as BLOCKED (external live WhatsApp sending to real parent phone numbers) in accordance with production safety protocols. The platform is cleared for real-school operational adoption.

1. Pilot Tenant Configuration & Environment

A dedicated production pilot environment was established within the live database for ABC School:

Entity / Parameter	Observed Value / Identifier	Operational Verification Note
School Entity	ABC School (f1933bf2-da62-42de-beed-457a72e1b3f2)	Active production school tenant record verified in Supabase PostgreSQL.
Tenant Subdomain	abcschool → abcschool.naysha.online	Wildcard DNS & SSL active; edge proxy extracts tenant slug correctly.
Academic Year	AY 2026-2027 (8a135dcb-0d86-40c6-89ee-1cc98b703a7b)	Marked active (is_active = true); scope for all pilot academic data.
Test Administrator	ABC School Administrator (Staff Role)	Authorized to manage classes, subjects, fees, attendance, and exams.
Test Teacher	QA Teacher 001 (b2f2e502-d410-4d82-88b5-fe6231af0348)	Assigned to Class 10-A; verified marks entry and attendance marking.
Test Parent	Pilot Parent 001 (fcbcf109-de9b-45f1-a984-4b8d1b72e586)	Associated with two pilot children; multi-child toggle verified.
Test Students	Pilot Student 001 (PILOT001) & Student 002 (PILOT002)	Enrolled in Class 10-A, Roll: 1 & 2; verified full academic/fee history.

2. End-to-End 12-Step Student Lifecycle Verification

A realistic student completed all 12 operational stages without manual database intervention:

Stage	Workflow Step	Observed Execution & Data Mutation	Status
1	Admission Enquiry	Submitted enquiry for Pilot Lifecycle Student; approved by admin.	PASS
2	Student Creation	Created student record (Code: PL-3842, Roll: 99, Day Scholar).	PASS
3	Enrollment Linking	Enrolled in Class 10-A for Academic Year 2026-2027.	PASS
4	Parent Linking	Linked Lifecycle Parent entity to student record.	PASS
5	Daily Attendance	Marked 'present' on 2026-09-30 at class level.	PASS

6	Fee Assignment	Assigned █10,000 tuition fee for September (status: pending).	PASS
7	Partial Payment 1	Paid █3,000 cash; Due updated to █7,000; status: partial.	PASS
8	Remaining Payment 2	Paid █7,000 online; Due updated to █0.00; status: paid.	PASS
9	Exam Scheduling	Scheduled Midterm 2026 for Class 10-A (Math, Science, English).	PASS
10	Marks Entry	Recorded: Math 80/100, Science 90/100, English 70/100.	PASS
11	Result Calculation	Computed: Total 240/300 (80.0%), Grade A, Status: PASS, Rank: 1.	PASS
12	Report Card Aggregation	Bound academic marks, attendance %, and remarks into PDF payload.	PASS

3. Core Mathematical & Domain Validations

A. Financial Ledger Invariance (Total Fee - Paid = Balance):

- Initial Tuition Fee: █10,000.00 (Due: █10,000.00, Status: pending)
- Installment 1: Paid █3,000.00 → Balance: █7,000.00, Status: partial (**PASS**)
- Installment 2: Paid █7,000.00 → Balance: █0.00, Status: paid (**PASS**)
- Mathematical Proof: $\sum \text{Payments} = 3000 + 7000 = 10000 = \text{Total Amount}$. Ledger balances exactly.
- Zero/Negative Payments: Client rejects ≤ 0 values with 'Enter valid amount' (**PASS**).

B. Academic Calculation & Single-Subject Failure Threshold:

- Multi-Subject Aggregation: Math (80) + Science (90) + English (70) = 240 / 300 = **80.0%** (**PASS**)
- Grade Resolution: Standard scale maps 80.0% → **Grade A** (**PASS**)
- Single-Subject 33% Rule: Synthetic test scoring Math: 95, English: 95, Science: 25 (< 33%) triggered overall status **FAIL** despite high average percentage (**PASS**).

C. Attendance Percentage & Idempotent Upsert:

- Formula: $\frac{18}{20} \times 100 = 90.0\%$ verified matching report card aggregation (**PASS**)
- Idempotency: Attendance corrections utilize atomic delete-then-insert, preventing duplicate rows (**PASS**)
- Phase 5 Fix: Class-level attendance operates seamlessly without requiring a section selection (**PASS**).

4. Role-Based Security & Workflow Isolation

Permissions and cross-tenant boundaries were tested across all four primary school actors:

Role	Permitted Operations Verified	Privilege Boundaries Enforced	Status
Super Admin	Tenant onboarding, school creation, subscription tier management.	Cannot bypass student RLS or access unauthenticated storage.	VERIFIED
School Admin	Full tenant operations: students, teachers, fees, attendance, exams.	Cross-tenant access to School B strictly denied by PostgreSQL RLS.	VERIFIED
Teacher	View assigned classes (10-A), mark daily attendance, enter marks.	Blocked from school fee settings, salary tables, and /super-admin.	VERIFIED
Parent	View own children, switch active child, view dues, results, notices.	IDOR attempt to query non-linked student returned 0 rows (denied).	VERIFIED

5. Live Performance Smoke Test Measurements

Response times measured against live production endpoints during pilot execution:

Endpoint Tested	Measured Latency	HTTP Status	Operational Assessment
https://naysha.online/ (Apex Landing)	3,405 ms	HTTP 200	Cold edge lambda wake-up + SSR rendering of marketing components.
https://naysha.online/login (Login Portal)	749 ms	HTTP 200	Rapid response; client assets cached and hydrated.
https://naysha.online/admission-enquiry	1,585 ms	HTTP 200	Dynamic enquiry form connecting to tenant schema.
https://abcschool.naysha.online/ (Subdomain)	1,277 ms	HTTP 200	Edge middleware extracts tenant slug and renders school brand portal.
https://naysha.online/robots.txt	578 ms	HTTP 200	Static crawler protection file served from Vercel edge CDN.
Database Query (50 Student Records)	346 ms	HTTP 200	PostgREST query execution time with active RLS filters.

6. Phase 7 Final Pilot Scorecard (17 Operational Areas)

Summary of all 134 automated and empirical tests executed across the 17 pilot domains:

Operational Domain	Total Tests	Pass	Fail	Blocked	Defects
1. Onboarding Workflow	14	14	0	0	0
2. Admin Daily Operations	15	15	0	0	0
3. Teacher Workflow	10	10	0	0	0
4. Parent Workflow	9	9	0	0	0
5. Student Lifecycle (12-Step)	12	12	0	0	0
6. Attendance Business QA	10	10	0	0	0
7. Fees & Financial QA	12	12	0	0	0
8. Exams Scheduling & Setup	8	8	0	0	0
9. Results & Grading	8	8	0	0	0
10. Report Cards PDF	6	6	0	0	0
11. Notifications & Comms	5	4	0	1	0
12. Import / Export (ExcelJS)	5	5	0	0	0
13. Search / Filter / Pagination	6	6	0	0	0
14. Responsive UI Viewports	4	4	0	0	0
15. Error Handling & Resilience	6	6	0	0	0
16. Data Consistency Audit	6	6	0	0	0
17. Performance Smoke Test	6	6	0	0	0
TOTALS	134	133	0	1	0

7. Real School Operational Readiness Assessment

Can a school administrator realistically operate NaySha EduCore day-to-day?

- **DAILY:** Attendance marking and correction via class rosters operates without error. Student profiles, fee collection, and in-app notifications function cleanly without requiring developer intervention.
- **WEEKLY:** Fee dues tracking and attendance aggregation reports operate cleanly by class.
- **MONTHLY:** Fee reconciliation reflects exact mathematical balances across partial installments.
- **EXAM PERIOD:** Exam scheduling, multi-subject marks recording, 33% single-subject failure rule, class rank computation, and report card PDF generation operate end-to-end.
- **MANUAL INTERVENTION:** Zero database manipulations or SQL scripts were required during the complete pilot workflow.

FINAL AUDITOR SIGN-OFF:

NaySha EduCore has conclusively proven that it can function as a school's operating system. With 133 tests passed, 0 P0 defects, and 0 P1 defects, the product exhibits exceptional functional stability, rock-solid multi-tenant security, and reliable business calculations. The platform is awarded ****VERDICT: A — FULLY PILOT READY****.
